

Gustavo Antonio Perin

Software Engineer — Full-Stack & Distributed Systems

São Carlos, SP, Brazil · gustavoperin067@gmail.com · linkedin.com/in/gustavoaperin · github.com/Bobagi · bobagi.space

Full-stack software engineer with 6 years of experience shipping production systems, currently on a telecom BSS/OSS platform: ~40 event-driven NestJS/TypeScript microservices on Kubernetes (GCP) with Kafka and gRPC. Wrote a 3GPP ASN.1/BER billing decoder from scratch and solely own regulatory services where errors are not an option. Outside work, I design, build, ship and operate 11+ live products end to end.

EXPERIENCE

Software Engineer · Unifique Telecomunicações (remote) Mar 2024 – present

- Mobile team (MVNO), BSS/OSS platform: ~40 event-driven NestJS/TypeScript microservices under Clean Architecture andDDD; end-to-end work, from binary decoding to the customer app; 500+ merge requests.
- Wrote from scratch, with no mediation library, an ASN.1/BER Charging Data Record decoder (3GPP TS 32.298/32.260) for ZTE core binaries — data, IMS voice, CS voice and SMS — feeding ClickHouse via gRPC and Kafka.
- Sole owner of ANATEL regulatory services: SIGA file generation/transmission over SFTP with atomic writes and retries, and the EIR/“Celular Legal” service blocking IMEIs from millions of streamed records; redesigned a ~40h job to run asynchronously, eliminating recurring failures.
- Built a gRPC analytics service over Google BigQuery for court-ordered subscriber identification under CGNAT.
- Testing with Vitest + TestContainers (real PostgreSQL and Kafka); GitLab CI/CD; Kubernetes.

Full-Stack Developer · Triplos Tecnologia e Sistemas Dec 2021 – Nov 2023

- Full-stack development of business web systems in ASP.NET (C#) and SQL Server, delivering screens and modules end to end — including an inventory-control module (stock, calculations and reporting) used daily by a client company.

Junior Full-Stack Developer · NetDente Feb 2020 – Dec 2021 (intern until Aug 2020)

- Developed and maintained a production ASP.NET (C#) web system with MySQL and AWS S3, working through a support-ticket flow of bug fixes and new features.
- Delivered modules: document/image upload and viewer with digital signature, WhatsApp integration, recurring billing with configurable periodicity, and database synchronization jobs.

SELECTED PROJECTS (all live, self-hosted on a Linux VPS I run: Docker, nginx/TLS, Cloudflare, automated backups)

Coin Hub — investment platform with automated Binance trading and B3 portfolio tracking (SvelteKit/Go/PostgreSQL).

coin.bobagi.space

Warframe Farm Helper — 4,400+ server-rendered pages, live game state, 4 languages, 107 automated tests (Node/Express/SQLite).

warframe.bobagi.space

Tic Tac Verse — Android game on Google Play in 6 languages (Flutter/Dart), releases automated via the Play Developer API.

Cartomania — multiplayer card game with server-authoritative matches (SvelteKit/NestJS/PostgreSQL). cartomania.bobagi.space

EDUCATION

BSc, Information Systems — University of São Paulo (USP), 2018–2023

Technical Degree, Mechatronics — ETEC Paulino Botelho, 2015–2016

LANGUAGES

Portuguese — native

English — advanced

CORE SKILLS

Backend: Node.js · TypeScript · NestJS · Go · gRPC · REST APIs · Kafka · microservices · DDD/Clean Architecture

Infra & data: Kubernetes · Docker · GCP · GitLab CI/CD · Linux · PostgreSQL · ClickHouse · BigQuery · MySQL · SQL Server

Also: SvelteKit · Next.js · Flutter/Dart · ASP.NET (C#) · Vitest/TestContainers · Datadog
