SUMMARY

Full-stack developer who ships end-to-end: I design, build, deploy and operate my own products — currently **11+ projects live in production**, including an Android game published on Google Play in 6 languages, two client e-commerce storefronts, web apps, game servers and developer tools. Everything runs on infrastructure I administer myself (Linux VPS, Docker, nginx, Cloudflare), with store publishing, ads and search-console workflows automated through official Google APIs.

SELECTED PROJECTS (ALL LIVE)

Tic Tac Verse — Android game on Google Play play.google.com/store/apps/details?id=com.bobagi.tictacverse
Flutter · Dart · AdMob + UMP consent · Play Developer API

- Ultimate tic-tac-toe (9-boards) flagship mode plus Chaos/Shift variants; minimax CPU with 3 difficulty levels.
- Localized into 6 languages (EN/PT/ES/HI/BN/NE) with 7 store listings; in-app updates, review flow and Google Ads campaign.
- Release pipeline automated end-to-end via the Play Developer API (build, upload, staged rollout).

Warframe Farm Helper — game-data search engine warframe.bobagi.space
Node.js · Express · SQLite · MiniSearch · SSR SEO

- 4,400+ server-rendered item pages (drops, relics, live Void fissures) in 4 languages; 107 automated tests.
- Daily idempotent data ingestion from official drop tables; structured data (JSON-LD), sitemap and clean URLs.

Cartomania — online collectible card game cartomania.bobagi.space
SvelteKit · NestJS · PostgreSQL

- Server-authoritative multiplayer duels (classic and attribute modes), trilingual EN/PT/ES.

Coin Hub — personal investing platform coin.bobagi.space
SvelteKit · Go · PostgreSQL · Binance API

- Crypto trade automation (DCA, take-profit, price alerts) plus B3 stock portfolio and dividend tracking.

Client work — two production e-commerce storefronts cheri.bobagi.space · vsdragon.bobagi.space
Next.js · TypeScript · Docker

- Chéri Doces (confectionery, Brazil) and VS.Dragon (apparel, Portugal): catalog, cart/checkout flows and WhatsApp ordering, built and operated for the clients.

Clonador — Android APK cloner bobagi.space/clonador · github.com/Bobagi/clonador
Java · ARSCLib · apksig

- Rewrites the binary manifest and re-signs APKs on-device to run multiple instances of any app — no root required.

More live projects bobagi.space
• RetroASM (in-browser 16-bit Assembly IDE/simulator, React+TS), Rhyme (real-time freestyle trainer, Web Speech API), Primordium (crafting game), modded Terraria server with a live status page (Docker + Node), and open-source server guides for Terraria/Project Zomboid.

INFRASTRUCTURE & OPERATIONS

- Operate a production Linux VPS hosting 16 subdomains: Docker Compose, nginx + TLS, Cloudflare DNS/proxy, hardened firewall, fail2ban, PM2, automated backups and updates.
- Automation of Google Play releases, AdMob/Ads reporting and Search Console via official APIs (service accounts, OAuth).

SKILLS

Languages	JavaScript/TypeScript, Python, Dart, Java, C#, SQL
Frontend	Vue, React, SvelteKit, Next.js, Flutter
Backend	Node.js/Express, NestJS, Go, PostgreSQL, SQLite
DevOps	Linux, Docker, nginx, Cloudflare, GitHub Actions, CI/CD
Other	Web automation (Puppeteer/Selenium), REST APIs, i18n, SEO

LANGUAGES

Portuguese	native
English	professional working proficiency
